# Individual Long-Term Care Planning in Maryland Survey Analysis 

Financial Planning

## Introduction

In 1999, the Maryland Department of Health and Mental Hygiene commissioned the University of Maryland, Baltimore County (UMBC) to conduct a survey designed to measure knowledge, attitudes, and behaviors regarding long-term care planning in Maryland. The survey was administered to non-institutionalized Maryland residents between the ages of 40 and 70 years currently not using long-term care services. Approximately 1,500 telephone interviews were conducted between July and October 1999 based on a random sample geographically representative of the State of Maryland.
"Financial Planning" provides information on retirement and long-term care planning. This report is one of several that presents findings from analysis of the survey. Additional reports available regarding the survey are:

- "Long-Term Care Insurance"
- "Health Promotion"
- "Information Acquisition"

Individual financial planning for retirement is a growing concern among "baby boomers."
Expectations of the employer and the government regarding retirement are rapidly changing. Increased job mobility and concerns about the future of the Social Security system have highlighted the role of personal responsibility in planning for future needs.

This report explores issues of financial planning for long-term care such as perceptions of future long-term care needs, the anticipated age long-term care will be needed, and financial planning behaviors. In addition, survey participants identified work goals after retirement, the expected age of retirement, current level of saving and investment, and financial concerns for the future.

Findings from the study are primarily based on demographic analysis of survey participant responses to issues regarding financial planning for retirement and long-term care planning. Response frequencies are reported by the following demographic characteristics: age, gender, race, marital status, education, occupation, income, and Maryland region. Refer to the Appendix for the complete analysis of responses by demographic variable. In some instances, percentages presented in graphic form do not equal 100 percent due to rounding.

In general, survey analysis shows that the majority of respondents believe they are less likely or just as likely to need long-term care in later years than the average person. Less educated or low income individuals indicate a greater likelihood of requiring longterm care than other respondents.

Most survey participants intend to or already have contacted an agency about postretirement income, consulted a financial advisor, invested in a personal pension plan, and/or inquired about Medicare coverage of long-term care services. In general, these financial planning behaviors increase with age, level of education, and income. Interestingly, in comparison to Non-Hispanic Whites, fewer Non-Hispanic African Americans and Racial/Ethnic Minorities are participating in several of these financial
planning activities. In addition, among all respondents, few people are planning to move to a retirement community in the future, with the percentage of those "not planning to" increasing with age.

For most respondents, the financial issues of substantial concern during retirement years are financial independence, maintaining the current standard of living, and the ability to pay for medical care and prescription drugs. More respondents who are low income, less educated, in younger age groups, and/or Non-Hispanic African American worry over these issues than other survey participants.

The analysis shows that, in general, survey respondents are aware of the need for financial planning for retirement. While most think that they have the discipline and habits to save money for retirement, a substantial percentage indicate difficulty in setting aside money for the future. However, the majority of respondents, regardless of opinions about retirement planning, indicate saving or investing at least as much as the previous year.

## Perceptions of Future Long-Term Care Needs

■ Survey respondents were asked about their likelihood of needing long-term care at some point in the future compared to the average person. Responses regarding perceptions of future long-term care needs are reflected in Figure 1. In general, the majority of respondents believe they have the same or less likelihood of requiring long-term care at some point in the future.

- Compared to the average person, 40\% believe that they are just as likely to require long-term care in the future.
- $34 \%$ report that they are less likely to need long-term care at some point in their later years.
- $9 \%$ of respondents indicate that they are more likely to need long-term care services than the average person.
- $7 \%$ believe that they will not need long-term care services at all.

Figure 1
Perceptions of Future Long-Term Care Needs

- More men (38\%) than women (31\%) perceive a lower likelihood of needing long-term care in later years.
- As reflected in Figure 2, the percentage of respondents that believe they have the same likelihood of needing long-term care in the future decreases with age, from 42\% of 40-45 year olds to 31\% of 66-70 year olds.

- $35 \%$ of Non-Hispanic Whites believe they are less likely to require longterm care in the future compared to 30\% of Non-Hispanic African Americans and 29\% of other Racial/Ethnic Minorities.
- The percentage of respondents that believe that they have the same or less likelihood as the average person of needing long-term care in the future increases with higher levels of education.

- Compared to other Maryland regions, 44\% of respondents living in the National Capital Area believe they are just as likely as the average person to need long-term care services in the future. Also, 42\% of survey participants in the Eastern Shore Area report that they are less likely to require long-term care in the coming years.
- Persons earning less than \$20,000 a year (23\%) perceive a greater likelihood of needing future long-term care services than persons of higher income levels (Figure 4).

- Regardless of how likely respondents perceive their need for long-term care in the future (same, less, or more) compared to the average person, the age at which respondents anticipate a need for long-term care ranges between 71 and 90 years. Similarly, when asked the age at which the average person would first require longterm care, the majority of respondents identified the 71 to 80 year range.
- How one feels about his/her present general health also affects the perception of future need for long-term care services. The distribution of anticipated long-term care needs is considerably different for persons who rate their present health differently (Figure 5).
- $47 \%$ of persons with excellent health believe they are less likely to require long-term care than the average person.
- $54 \%$ of respondents with poor health report they are more likely to need long-term care.

- Of the 1,508 survey participants asked about their likelihood of needing long-term care, 111 respondents report that they do not expect to need such care in the future. The following reasons were given for their choice:
- $18 \%$ believe they may not live long enough to need long-term care services.
- $64 \%$ expect to be in good health in their later years.
- $33 \%$ report that no one in their family has ever needed long-term care services.
- $12 \%$ believe they cannot afford long-term care so they will make do without it.

## Financial Planning Options

■ Survey participants were asked to respond to several financial options to ascertain whether they plan to, are not planning to, or have already:

- Asked Social Security or other relevant agency about their monthly income after retirement
- Consulted a financial planner, professional advisor, attorney, or attended retirement seminars
- Made plans to move to a retirement community providing supportive services
- Invested in an IRA or other personal pension plan
- Inquired about Medicare coverage of long-term care.

The majority of persons (more than 70\%) responding to these questions are responsible for the financial planning in their household.

## Inquired about Post-Retirement Income

■ Among all respondents who were asked whether they planned on contacting the Social Security agency or other relevant agency about their monthly income after retirement, $56 \%$ report that they have already made such inquiries. In addition, 28\% are planning to contact an agency and only a small percentage (9\%) indicates that they are not planning to make inquiries about post-retirement income.

- The percentage of persons who have contacted an agency increases with age (Figure 6).

- $43 \%$ of Racial/Ethnic Minorities have made inquiries compared to $54 \%$ of Non-Hispanic African Americans and 58\% of Non-Hispanic Whites. More Racial/Ethnic Minorities (14\%) also report that they are not planning to contact an agency than Non-Hispanic African Americans (9\%) or NonHispanic Whites (9\%).
- The percentage of respondents who have already contacted an agency about post-retirement income increases with higher levels of education (Figure 7).

## Sought Financial Planning Advice

- The majority of survey respondents (54\%) have already consulted a financial planner, a professional advisor, an attorney, or attended retirement seminars. Twenty percent are planning to engage in financial consulting services and 20\% indicate no plans for doing so.
- As reflected in Figure 8, although the majority of persons have already contacted a financial consultant, the percentage of respondents who do not plan to contact a financial consultant increases with age.

- More Non-Hispanic Whites (57\%) have sought financial planning advice than other racial groups. In addition, a higher percentage of Non-Hispanic African Americans (27\%) and Racial/Ethnic Minorities (29\%) report they are not planning to seek such advice compared to Non-Hispanic Whites (17\%).

- Across education levels, a higher percentage of persons with graduate school experience (67\%) have already sought financial planning services.

- $61 \%$ of persons employed by the white collar industry and $64 \%$ of military personnel have consulted a financial advisor regarding financial planning for their later years.
- $53 \%$ of respondents earning less than $\$ 20,000$ a year report that they are not planning to contact a financial planner, professional advisor, attorney, or attend retirement seminars. In comparison, 65\% of persons with incomes greater than \$100,000 have already sought financial advice.

## Retirement Community

- Among all survey respondents, 926 (61\%) are not planning to inquire about moving to a retirement community during their later years. Only $2.5 \%$ of persons report that they have already made such plans.
- As age increases, the percentage of respondents who are not planning to make retirement community arrangements increases, from $57 \%$ of the 4045 year age group to 69\% of the 66-70 year age group.
- Regardless of education level, the majority of persons are not planning to move to a retirement community, with percentages ranging from $57 \%$ of respondents with less than a high school degree to $68 \%$ of high school graduates.
- Across income levels, the majority of respondents, ranging from 55\% to $67 \%$, do not plan to make arrangements to move to a retirement community during their later years (Figure 12).

## IRA Investment

- A high percentage of survey respondents (75\%) have already invested in an IRA or other personal pension plan and nine percent of persons are planning to do so. Ten percent do not intend to make retirement investments.
- Regardless of age, the majority of persons have made investments for their retirement, ranging from 69\% to $79 \%$ of survey respondents (Figure 13).

- More Non-Hispanic Whites (79\%) have invested in an IRA or other pension plan than Non-Hispanic African Americans (61\%) or Racial/Ethnic Minorities (64\%).
- $87 \%$ of survey respondents with graduate school experience compared to 34\% of persons with less than a high school degree have already made an investment for their retirement years (Refer to Figure 14).

- The percentage of persons that have invested in a personal pension plan such as an IRA increases with income. Ninety-one percent of respondents earning more than $\$ 100,000$ has made an investment compared to $32 \%$ of respondents earning less than $\$ 20,000$ (Figure 15).

- $82 \%$ of white collar workers and $61 \%$ of blue collar workers have invested in a personal pension plan.

## Medicare Inquiries

- Of the 1,508 respondents who were asked about their financial planning behavior, $28 \%$ are not planning to make Medicare inquiries, $29 \%$ are planning to, and $22 \%$ have already done so.
- $57 \%$ of survey respondents age 66-70 years have inquired about longterm care coverage under Medicare, compared to 10\% of 40-45 year olds (Figure 16).

- The percentage of respondents intending to make Medicare coverage inquiries increases with higher education levels, ranging from 23\% of persons with less than a high school degree to $33 \%$ of persons with graduate school experience (Figure 17).

- The percentage of employed respondents that have made inquiries about Medicare coverage ranges between 19 and 28\%, depending on occupation.

■ Among respondents who are not planning to engage in financial planning activity (make inquiries about their monthly income after retirement, consult a financial advisor, make plans to move to a retirement community, invest in a personal pension plan, and/or inquire about Medicare coverage of long-term care), more than 40\% report that they know about the financial needs during retirement and have the discipline and habits to save money for retirement.

■ For those who have already engaged in a financial planning activity with the exception of making plans to move to a retirement community, more than 60\% understand that financial needs in retirement will probably not be taken care of without proper planning now.

## Attitudes Toward Financial Planning

■ The survey gauged attitudes toward financial planning for retirement years. Survey respondents were given several statements about retirement planning and asked to rate the accuracy of the statements in describing their own behavior. Responses from the 1,132 persons who answered this question are presented in Figure 18.

- $49 \%$ of respondents report that they know about financial needs during retirement and believe they have the discipline and habits to save money for this stage of life.
- $43 \%$ do not find it difficult to follow a plan to save money for their retirement years.
- The majority of respondents believe that meeting financial needs in retirement requires proper planning.

## Have the Discipline and Habits to Save Money for Retirement

- More men (54\%) than women (46\%) believe that they have the discipline to save money for retirement.
- As age increases, the percentage of respondents that say that they have the discipline and habits to put aside money for retirement increases.
- A higher percentage of respondents with graduate school experience (56\%) believe that they have adequate money management skills to save for retirement than respondents of other education levels (Figure 19).

- As income increases, more respondents believe that they have the discipline and habits to save money for retirement.
- Of the 552 respondents who report that they are aware of financial needs during retirement and have the discipline and habits to save money for retirement, 47\% say that they are saving or investing the same amount of money compared to the last year and $46 \%$ say that they are saving or investing more.

## Find it Difficult to Follow a Savings Plan for Retirement

- More women (61\%) than men (39\%) report that it is "somewhat correct" that they find it difficult to follow a plan to save money for retirement.
- $29 \%$ of blue collar workers find it hard to follow a plan to save money for retirement.
- As the level of income increases, the difficulty in saving money specifically for retirement decreases from 47\% of those earning less than \$20,000 to $6 \%$ of respondents earning more than $\$ 100,000$ (Figure 20).

■ Of the 191 respondents who are aware of financial needs during retirement but find it difficult to save money for the future, $53 \%$ are saving or investing the same amount of money compared to last year. Twenty percent report saving or investing less than the previous year.

- Having the discipline to save money for the future while at the same time finding it difficult to follow a savings plan describes 112 survey participants "very correctly" or "somewhat correctly."
- The percentage of respondents who believe that retirement planning is needed to meet financial needs in retirement increases with age (Figure 21).

- More Non-Hispanic Whites (61\%) than Non-Hispanic African Americans (52\%) or Racial/Ethnic Minorities (43\%) believe that retirement planning is needed to meet financial needs in the future.
- Persons with a higher education level believe that financial needs in retirement will probably not be taken care of without planning for it now.

## Retirement Planning Prevents Enjoying Life Now

- More Non-Hispanic Whites (66\%) than Non-Hispanic African Americans (64\%) or Racial/Ethnic Minorities (53\%) believe that the following statement is an inaccurate description of themselves: "I tend not to worry about financial needs during retirement because it prevents me from enjoying my life now."
- $80 \%$ of respondents earning more than $\$ 100,000$ disagree with this statements compared to $47 \%$ of persons earning less than \$20,000.
- $73 \%$ of persons with graduate school experience think that this statement is an incorrect description of themselves compared to $56 \%$ of respondents with less than a high school degree (Figure 22).

Persons who report that they will not be retiring for some time and their financial needs will be taken care of without planning for it now are concerned about the same financial issues in retirement (such as financial independence and maintaining the present standard of living) as other respondents. In particular, 59\% of this group are concerned with the ability to pay for medical care and prescription drugs in their retirement years. Similarly, respondents who tend not to worry about financial needs during retirement because it would prevent them from enjoying life now also share the same financial concerns about retirement. Specifically, 56\% of this group are also worried about being able to pay for necessary medical care and $33 \%$ are concerned about being able to help children or grandchildren financially.

## Employment and Retirement Planning

■ In addition to inquiring about perceptions of the future need for long-term care and financial planning behavior, the survey asks questions about employment status and plans after retirement.

- As shown in Figure 23, employment status of survey respondents varies.

- As age increases, the percentage of survey participants employed fulltime decreases from 75\% of 40-45 year olds to 6\% of 66-70 year olds (Figure 24).

- More Non-Hispanic African Americans (66\%) than Non-Hispanic Whites (57\%) or Racial/Ethnic Minorities (57\%) are employed full-time (Figure 25).

- The majority of persons, regardless of employment status, would work part-time after retirement from their present job. In particular, 61\% of respondents currently employed full-time report that they would seek parttime employment after retirement (Figure 26).

- When asked at what age they plan to retire from the workforce completely, the majority of respondents (63\%) reported between the ages of 61-70. Forty-five percent of persons employed full-time say that they plan to completely retire between the ages of 61 and 65 .

## Retirement Savings or Investment

- Survey respondents were also asked if they were saving or investing more, less, or about the same amount of money than the previous year. Responses are presented in Figure 27.

Figure 27
The Amount of Money Respondents are Saving or Investing
Compared to the Previous Year

- Saving or investing more money than the last year decreases with age. For example, 42\% of 40-45 year olds report saving or investing more compared to 66-70 year olds (Figure 28).

- As reflected in Figure 29, 40\% of persons with graduate school or four year college experience report saving or investing more compared to last year than persons with no high school degree (18\%).

- More than persons employed by any other industry, $39 \%$ of white collar employees report increased savings or investment than the previous year.
- Growth in savings or investments increases with higher income. An increase in savings or investment from the previous year is indicated by $48 \%$ of respondents earning more than $\$ 100,000$. In comparison, $11 \%$ of persons earning less than $\$ 20,000$ report saving or investing more than the last year.

## Financial Concerns in Retirement Years

■ Survey participants were asked to rate, by level of concern, several financial issues that occur during retirement. Responses are presented in Figure 30.

- A substantial percentage of respondents indicate major concerns to be the financial ability to live independently (53\%), maintaining the present standard of living (46\%), and the ability to pay for medical care and prescription drugs (47\%).
- $33 \%$ of respondents are not concerned with the ability to help children financially and $34 \%$ are not worried about having to rely on government assistance in the future.

Financial Ability to Live Independently

- More 40-45 year olds rate financial independence in their retirement years as a major concern than any other age group (Figure 31).

- Persons living in the Southern Area (60\%) and Eastern Shore Area (61\%) of Maryland indicate the greatest concern over the ability to be financially independent in the future.
- Concern about financial independence falls with increasing income level. Persons earning less than $\$ 20,000$ (60\%) indicate that this issue is a major concern more so than persons earning more than \$100,000 (51\%).

Maintaining the Present Standard of Living

- $52 \%$ of persons age 40-45 are concerned about maintaining their present standard of living (Figure 32).

- This financial issue is more of a concern for persons with less than a high school diploma than persons of other education levels. For example, 59\% of respondents without a high school degree compared to 39\% of persons with graduate school experience worry about maintaining their current lifestyle.
- As reflected in Figure 33, having adequate finances to sustain the present standard of living in the future is a major concern for lower income groups. Also, although most respondents in higher income brackets do not consider this financial issue a major worry, it is regarded as somewhat of a concern.

- $53 \%$ of survey participants who have been previously married worry about maintaining their current lifestyle, compared to $50 \%$ of those never married and 43\% of married persons.
- More Non-Hispanic African Americans (55\%) are concerned about this financial issue than Non-Hispanic Whites (45\%) or Racial/Ethnic Minorities (42\%).
- More women (41\%) than men (29\%) worry about paying for long-term care services during their retirement years.
- The percentage of respondents who report that this retirement issue is a major concern decreases with higher education levels. However, this issue is "somewhat of a concern" for persons with more education (Figure 34).

- As income increases, the percentage of respondents who rate having the ability to finance their long-term care needs as a major concern decreases. The percentage ranges from $53 \%$ of persons earning less than $\$ 20,000$ to $22 \%$ earning more than $\$ 100,000$.

## Ability to Pay for Medical Care and Prescription Drugs

- A larger percentage of younger respondents are concerned with the ability to pay for medical needs in their retirement years than persons of older age groups (Figure 35).

- More women (52\%) than men (40\%) are concerned about their financial ability to pay for medical care in the future.
- As income increases, the concern with financing future medical needs decreases, ranging from 58\% of persons earning less than \$20,000 to $39 \%$ of persons earning more than \$100,000.
- $54 \%$ of Non-Hispanic African Americans worry about the ability to pay for medical needs and prescription drugs compared to $45 \%$ of Non-Hispanic Whites and 45\% of Racial/Ethnic Minorities.
- $43 \%$ of women worry about outliving their assets and savings, compared to $33 \%$ of men.
- Persons with less education indicate more concern about this retirement issue than respondents with higher levels of education (Figure 36).

- The concern over outliving assets and savings falls with increasing income from $50 \%$ of respondents earning less than $\$ 20,000$ to $28 \%$ of respondents earning more than $\$ 100,000$.

## Having to Rely on Government Assistance

- $39 \%$ of men and $31 \%$ of women are not concerned about having to rely on government assistance in the future. Interestingly, 31\% of women also believe it is a major concern.
- As education level increases, the concern for this retirement issue falls from $33 \%$ of persons with less than a high school degree to $22 \%$ of respondents with graduate school experience.
- Having to rely on government resources in the future is not a concern as the level of income increases (Figure 37).

## Having Enough Money to Help Children or Grandchildren

- Survey respondents with graduate school experience (38\%) do not believe this issue is a concern, compared to $29 \%$ of high school graduates.
- More Non-Hispanic African Americans (34\%) are concerned with having enough money to help their children or grandchildren than Non-Hispanic Whites (23\%) or Racial/Ethnic Minorities (23\%).
- By income level, being able to help family members financially is somewhat of a concern or a major concern for the majority of respondents (Figure 38).

## Definition of Demographic Variables

## Education

| No High School Degree: | No formal schooling, $1^{\text {st }}$ through $8^{\text {th }}$ grade education, some <br> high school |
| :--- | :--- |
| High School Degree: | High school graduate or GED |
| Some college/Technical: | Some college; technical or trade school, 2-year degree |
| 4-year college: | 4-year degree |
| Graduate school: | Some graduate school experience; graduate degree |

Race

Non-Hispanic White:
Non-Hispanic African American:
Racial/Ethnic Minorities

Person of the White race and not of Hispanic ethnicity Person of the African American race and not of Hispanic ethnicity Asian, American Indian or Alaska Native, Native Hawaiian or other Pacific Islander, Hispanic, Other

## Occupation

Unemployed:
Military:
Service:
Student/Homemaker:
Blue Collar:

White Collar:

Person who is not currently employed
Military service
Service worker
Student or homemaker
Farmer, farm manager, farm laborer; operative, unskilled labor; skilled craftsman, foreman
Sales worker, clerical worker, proprietor, manager, official, professional

## Marital Category

## Married: Person who is currently married

Divorced/Widowed/Separated: Person who is divorced, widowed, or separated from their spouse
Not married/living with partner/ never married/single:

Person who is currently not married and/or living with a partner; single and/or never been married

## Income

Income response categories were limited to fixed ranges of dollar amounts:
Less than \$20,000
\$20,000 to \$30,000
\$31,000 to \$40,000
\$41,000 to \$60,000
\$61,000 to \$80,000
\$81,000 to \$100,000
More than \$100,000

## Overview of Tables

The following tables contain results of the survey response analysis by demographic characteristic. The second column of each table includes the number of the denominator used in the specific analysis by age, gender, race, education level, employment status, marital status, income, and Maryland region. The third column presents the survey question or statement and the frequency percentage for each response category by demographic characteristic. For example, on p.50, the following information is given for men who responded "not at all" to the survey question: $8 \%$. This means that $8 \%$ (or 50 ) of all men surveyed (620) had this response. Non-response of survey questions is not reflected in the tables.

Table 1 Characteristics of All Survey Respondents

| Variable | All Survey Respondents |
| :---: | :---: |
| Total | 1508 (100\%) |
| Age-no. (\%) |  |
| 40-45 yr. | 378 (25.1\%) |
| $46-50 \mathrm{yr}$. | 306 (20.4\%) |
| $51-55 \mathrm{yr}$. | 316 (21\%) |
| 56-60 yr. | 219 (14.6\%) |
| 61-65 yr. | 163 (10.8\%) |
| 66-70 yr. | 121 (8.1\%) |
| Refused | 5 (.03\%) |
| Gender-no. (\%) |  |
| Male | 620 (41.1\%) |
| Female | 888 (58.9\%) |
| Race-no. (\%) |  |
| Non-Hispanic White | 1172 (77.7\%) |
| Non-Hispanic African American | 207 (13.7\%) |
| Racial/Ethnic Minorities | 129 (8.6\%) |
| Education Level-no. (\%) |  |
| No High School degree | 83 (5.5\%) |
