

Faculty Senate Information Item:

GullNet (PeopleSoft Campus Solutions) is scheduled to be upgraded from version 9.0 to 9.2 over the December holiday break. This upgrade will ensure that maintenance and support for the Student Information System of Record is current, and it will allow for future upgrade flexibility.

The upgrade is a major effort with a tight schedule that requires several days of system downtime and coordination between many departments. Given the impacts to various departments and processes, the only available installation timeframes are during the December holiday break period or the brief gap between the end of spring and start of summer sessions.

In order to minimize risk and impact, we are targeting the December holiday schedule (target of December 21-27) as it provides more time for migration and system validation.

For faculty, this means a request to have fall grades in before December 21, 2016. Your cooperation and patience is appreciated as we perform this essential update. For questions regarding the update, please contact Terri Stuck or C.J. Winger.
